

FOR IMMEDIATE RELEASE

World Phone's IP-PBX new feature- "Drag n Drop"

World Phone Infrastructure Services Pvt. Ltd. an ISO 9001:2008 certified company has launched its IP-PBX recently and has now introduced an all new feature- "Drag n Drop".

The drag n drop feature is an advanced, innovative and user friendly feature which helps the operator to simply drag and drop any call between extensions. This feature can help in initiating new calls or transferring calls.

Initiating new call: Operator can initiate an extension to extension call by "Drag n Drop" feature in the operator panel. When executed, the system will ring the source extension first. Once the call is answered, the system then dials the destination extension and hence call is established.

Transferring call: "Drag n drop" feature can also be used to transfer an existing call to another extension. In this feature, operator can drag the on-going call to a new extension. Call is then transferred to the new extension and one on the existing extension will be dropped.

Mr. Aditya Ahluwalia, Chairman, World Phone said, "Our technical team is constantly working to provide new innovative features. We believe World Phone is the first to provide this feature in the country".

World Phone's IP-PBX will revolutionize the way you talk, so say goodbye to ISD, STD & Local calls and switch to its Global Intercom!
